

# Conversational Knowledge Graph Extraction

*Engineering*

v2 - 28/05/2026

# Pipeline

|   |                                                             |
|---|-------------------------------------------------------------|
| 1 | <b>preprocessing</b><br>eml → json → splitting              |
| 2 | <b>schema definition</b><br>conversation with LLM → schema  |
| 3 | <b>extraction</b><br>emails → LLM looking at schema → graph |
| 4 | <b>resolution</b><br>entity deduplication on graph          |

# Architecture

## networkX

Graph: creation, manipulation, of networks

## pydantic

data validation library

## gemma4

LLM - variants: e2b, e4b, 26b(limit)

## ollama

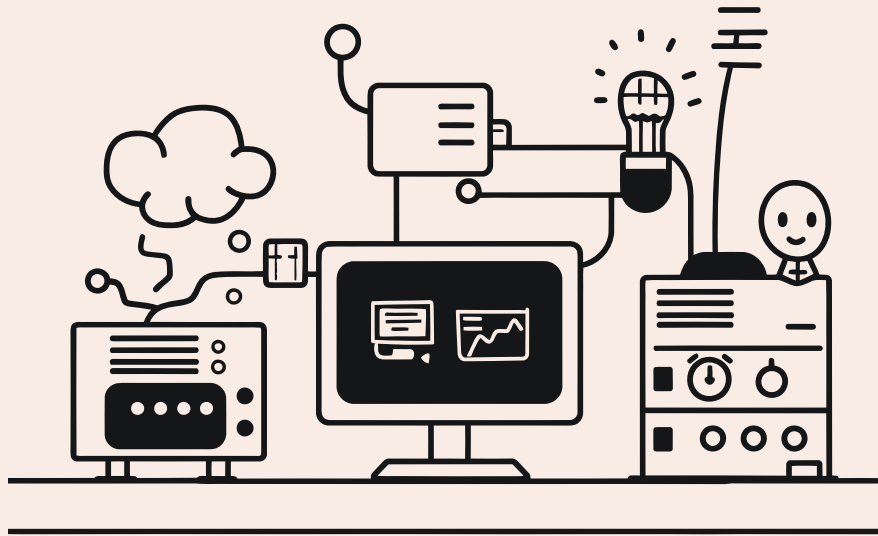

LLM runtime

## rich

UI - formatting in the terminal

## uv

python package manager

# Dataset: jeepproject@yahoo.com

## About the Data

- ~13000 emails from epstein private email
- downloaded from versioned torrent provided by <https://ddosecrets.org>

📁 Epstein files 2026-02-11.torrent

## Considerations

### Data Quality

All the emails are in eml format which is machine readable and are further processed
